

The Department of Economics at St. Paul's Cathedral Mission College organized a virtual Annual Students' Seminar on "Financial Market Operations: The Indian Perspective" on 28th May 2024 in association with the IQAC of the College. Dr. Shirsendu Mukherjee of Economics department anchored the entire programme. The programme began with prayer, done by Prof. Ruth Rhea Khan of Political Science department, followed by welcome address, delivered by our Teacher in Charge, Dr. Sudipta Middy. Next our Vice Principal, Prof. Binayak Bhattacharya, and IQAC Co-ordinator, Prof. Jaya Mukherjee addressed all the participants with encouraging words.

The seminar witnessed thought-provoking presentations from five student teams who showcased commendable research and analysis skills.

Team A explored equity markets and monetary policy surprises, while Team B shed light on the 2008 global financial crisis and the role of asymmetric information. Team C analyzed India's monetary policy and its impact on the economy. Teams D and E respectively delved into banking sector reforms in India and the challenges & opportunities within the Indian banking industry.

The judges (Prof. Subhendu Kanjilal of Mathematics Department and Dr. Indrani Banerjee of Economics Department) applauded the students' efforts and provided valuable insights. The engaging seminar fostered a conducive learning environment, allowing participants to enhance their subject knowledge. The programme ended with vote of thanks, given by Dr. Sudeshna Mitra, HOD of Economics department.

Inference

Six basic facts about the US economy:

1. Financial intermediaries play a significant role in the economy.
2. Relative unimportance of securities markets for financing corporations.
3. Financial markets as heavily regulated sectors.
4. Collateral's importance in debt contracts.
5. Limited access to securities markets for small corporations.
6. Debt contracts imposing substantial borrower restrictions.

These features expose the US economy to financial crisis, especially asymmetric information. Solutions include private information production and sale, government regulation, financial intermediation, net worth/collateral, and covenants discouraging information hiding.

Tiasa Bhattacharya (Presenting)

Introduction :

- Our paper focuses on the monetary policies and its effects on the Indian Economy. Monetary Policy is the most important financial instrument in economic management, mostly used by the Central Bank, RBI and other regulatory committees to control quantity, rate of money supply and automatically bring associated with the interest rate. In order to maintain better growth and stability of money supply in the nation, the monetary policy acts as a tool of the central bank aiming at 2 major objectives as:-
- 1. Facilitation of GDP growth and,
- 2. Controlling and regulation of inflation rate. The main objective of this study is to analyze effectiveness of the monetary policy and to analyze the impact on the selected monetary instruments as reference to the Indian Economy. There are mainly 2 types of Monetary policy such as:-
- a) Expansionary Monetary Policy: it makes credit creation easily available and there is increase in the supply of money. Money produced through such a policy is called cheap money.
- b) Contractionary monetary policy: it is used in tackling inflation in the economy by raising the interest rate and thus decreasing the supply of money.
